

Using nfs

Note: Take fresh machines

- Take two machines, server and client.

- On Server Machine

- Create a directory named **/mydrive/nfs_share**
- Create some files in it.
- Install and configure nfs.

- On Client Machine

- Create directory named **/mnt/nfs_drive**
- Mount nfs_share in above directory.
- Verify files are visible from that directory.
- Try deleting and creating some files in that directory.

httpd assignment (for research)

- Write a simple shell script, which will install httpd service and displays webpage **"Welcome to Sunbeam!"**.

- After running shell script, it should not ask user any instruction.
