

## Using vsftpd

---

**Note: Take fresh machines**

- Take two machines, server and client.

- On Server Machine

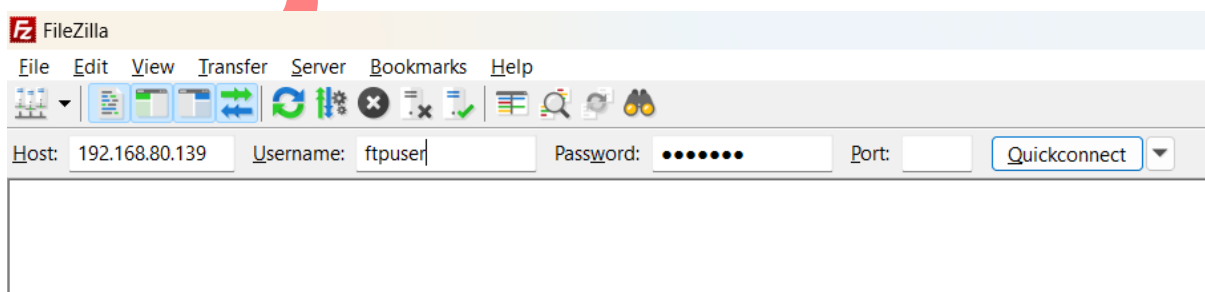

- Create a new user: **ftpuser**
- Set password: **test**
- Install and configure **vsftpd**.
- Create some files in **home directory of ftpuser**

- On Client Machine

- Install **ftp** service.
- Login with ftpuser and download the file from ftp server.
- Upload client's file on the FTP server.
- Try to download and upload all files at once.

- On Windows Machine

- Install **FileZilla Client** on windows machine.
- Give ftp server's credentials like this and click on quickconnect

- Download those files on windows machine
- Upload some files from windows machine and verify on FTP server.
